Aquaponics For Beginners: The Ultimate Crash Course Guide To Learning How To Grow Vegetables And Raise Fish In 30 Minutes Or Less!

Synopsis

Aquaponics: A revolutionary technique of growing more healthy plants in less time, aided by fish in your own backyard. Learn everything you need to know about how to start your very own soil-less garden. This book is for newbies in the world of aquaponics. If you are tired of fast foods from the fast-paced city life and would love to garden and grow all-natural food, but away from the comfort of the countryside, worry no more because this book solves your problem. If you are someone looking for simple, cheap alternative ways of farming then this book is right for you. You will learn a life-changing secret of the agricultural world: you can actually grow plants with a faster growth rate in the same amount of space that your neighbors have, without using soil. The fish will do your work for you. You will be able to transform your own garden using almost 70% less energy. You will unearth this old farming technique that saves your time, money, effort, and space. Not only will you be able to save time or money, but you will also help save Mother Nature because this system is in harmony with nature and not against it. By the time you finish listening to this book you are going to be able to produce your own fish and grow healthier organic plants. No more fertilizer or constant watering needed. Why you must hear this book: In this book you will learn how to raise plants and fish simultaneously in the aquaponics system This book will teach you the steps for building your very own do-it-yourself small aquaponics system. With this book you will learn how to choose the right kinds of plants and the right breeds of fish.

Gardening #73 in Books > Crafts, Hobbies & Home > Gardening & Landscape Design >

Greenhouses #184 in Books > Science & Math > Biological Sciences > Biology > Marine Biology

Customer Reviews

Typical "copied and pasted" information from other people's work and not from the "author's" own

knowledge. In places, it even reads like a bad translation from some other language to English. Also the author is apparently clueless enough to think that there are "warm blooded" fish you can raise. That would be difficult since the first truly warm blooded, or "endothermic" fish (Moonfish) was JUST DISCOVERED to be so. It is a Pacific deep-water fish so you will not be raising them in your aquaponics project. (Some tuna and sharks can warm their muscles - but it is not the same). So basically, nothing new or revolutionary or even all that educational here that you couldn't surpass with a simple Bing or Google search. Good thing it was free or I would be demanding my money back!

It is an excellent book for every novice in aquaponics business. I have learned a lot from this book such as how to choose the right kind of plants and fish breed that will work well in our very own aquaponic system. All the things we need to know about aquaponics are clearly-explained with this awesome book.

Great bit of information here, specially for someone like me who likes to garden. Its just cool to grow vegetables and fruits with fish, at least a 'wow' factor good or bad. This is a great guide to get started indoor or out, not as hard as one would think. Bonus for me because I wanted to make a small pond and this is perfect guide to start that project off, now by the garden. May even try growing rice, lol.

This is just the book I was looking for. I was trying to do some research on my own about aquaponics but it was so much better to have all the information organized into this great book! I definitely recommend this book!
